Psycholgy Made Simple

Abraham P. Sperling

Psycholgy Made Simple Abraham P. Sperling

Author's Note: The science of psychology began in a paradox: we know the remotest galaxies and invisible particles of matter better than we know ourselves, better than we know those persons who are closest to us. But the gap is being closed as our psychological knowledge continues to advance at a phenomenal rate. It is this advance that I have attempted to chart here. It has been my intention to set out for the reader the basic structure of the science of psychology in its present stage of development. To achieve this objective I have presented the findings of psychology as they clarify and explain human development and behavior from infancy through maturity - human behavior both in its normal and abnormal manifestations. Moreover, it has been my constant purpose to present that material in such a way that the reader will be able to understand and absorb its content readily, without difficulty of any kind.
